

# No name 'QApplication' in module 'PyQt5.QtWidgets' error in Pylint

Running into this issue in VS Code while trying to learn PyQt5, "No name 'QApplication' in module 'PyQt5.QtWidgets'", "No name 'QWidget' in module 'PyQt5.QtWidgets'".

I'm not sure if this is a pylint issue or something else. I've confirmed PyQt5 is installed with pip3 list but I can't seem to figure out the issue.

If you use VSCode, go to "File" > "Preferences" > "Settings" > click on this icon in top-left corner:

(The "settings.json" file will be opened) > add these lines to "settings.json":

```
{  
    "python.linting.pylintArgs": ["--extension-pkg-whitelist=PyQt5"]  
}
```
