

CONVERT PDF PAGES TO JPEG WITH PYTHON

<https://simply-python.com/2018/11/15/convert-pdf-pages-to-jpeg-with-python/>

A simple guide to extract images (jpeg, png) from PDF.

Objectives:

Extract Images from PDF

Required Tools:

[Poppler for windows](#)— Poppler is a PDF rendering library . Include the pdftoppm utility

[Poppler for Mac](#) — If HomeBrew already installed, can use brew install Poppler

[Pdf2image](#)— Python module. Wraps the pdftoppm utility to convert PDF to a PIL Image object.

Steps:

Install Poppler. For windows, Add “xxx/bin/” to env path

pip install pdf2image

```
from pdf2image import convert_from_path, convert_from_bytes
from PIL import Image # Importando o módulo Pillow para abrir a imagem no script
import pytesseract # Módulo para a utilização da tecnologia OCR
```

```
dpi = 200 # dots per inch
pdf_file = 'C:\\Users\\lindineu.duran\\Documents\\Python\\PdfToImage\\Dirf
2020.pdf'
pages = convert_from_path(pdf_file ,dpi )
for i in range(len(pages)):
    page = pages[i]
    page.save('output_{}.jpg'.format(i), 'JPEG')
```

How to install Poppler on Windows?

1. Go to [this page](#) and download the binary of your choice. In this example we will download and use poppler-0.68.0_x86.
2. Extract the archive file poppler-0.68.0_x86.7z into C:\Program Files. Thus, the directory structure should look something like this:
C:
└─ Program Files
 └─ poppler-0.68.0_x86
 └─ bin
 └─ include
 └─ lib
 └─ share
3. Add C:\Program Files\poppler-0.68.0_x86\bin to your system PATH by doing the following: Click on the Windows start button, search for Edit the system environment variables, click on Environment Variables..., under System variables, look for and double-click on PATH, click on New, then add C:\Users\Program Files\poppler-0.68.0_x86\bin, click OK.
4. If you are using a terminal to execute poppler (e.g. running pdf2image in command line), you may need to reopen your terminal for poppler to work.
5. Done!
